

DC Student Enrollment and Student Mobility, DCPS and Charter Schools

November 2007 - January 2008

Each month, the OSSE receives an update of student enrollment from both the District of Columbia Public Schools and the District of Columbia Public Charter School Board. In the chart below, the enrollment in each month shown is compared to the number of "mobile" students during that month. A student is defined as "mobile" if that student attended a different school or was not enrolled in the snapshot from the prior month.

Chart reads: In November 2007, there were 73875 students enrolled in all DCPS and public charter schools. Out of these 73875, 1850 were mobile - that is, enrolled in a different school or not enrolled in a DC public school in the previous month.

Data presented here are reported as percentages or rounded to the nearest 25 to avoid either over- or understating their precision. These figures are based on currently available information from the data systems of the District of Columbia Public and Public Charter Schools. Although the data are based on the most recent and accurate information available, there is an error range of about +/- 5%. The process of "cleaning" individual student records by OSSE will continue in collaboration with the participating school systems and schools with the goal of reducing error as much as possible.

DC Student Mobility Breakdown by Transfer Type by Month

November 2007 - January 2008

For each month shown, the school each student attends is compared to the school the student attended last month. For example, for the month of Dec-07, a student in the "Charter to DCPS" category was enrolled at a charter school in the previous month (November 2007) and a DCPS school in the month shown.

Chart reads: The blue bar on the far left shows that in November 2007, 1150 students were enrolled in a DCPS school and in the previous month were not enrolled in any DC public school (new to DCPS); 1125 students were enrolled in a DCPS school in December 2007 (maroon bar) and not enrolled in any DC public school in the previous month; 775 students were enrolled in a DCPS school in January 2008 (yellow bar) but not in any DC public school in the previous month.

*The "DCPS to Charter" category has 12, 6, and 3 students for each respective month; the "Charter to Charter Transfer" category has 1, 2, and 7 students for each respective month; all numbers, when rounded to the nearest 25, round down to 0.

Data presented here are reported as percentages or rounded to the nearest 25 to avoid either over- or understating their precision. These figures are based on currently available information from the data systems of the District of Columbia Public and Public Charter Schools. Although the data are based on the most recent and accurate information available, there is an error range of about +/- 5%. The process of "cleaning" individual student records by OSSE will continue in collaboration with the participating school systems and schools with the goal of reducing error as much as possible.

DC Student Mobility Breakdown by Transfer Type by Month (Percentage)

November 2007 - January 2008

For each month shown, the school each student attends is compared to the school the student attended last month. For example, for the month of Dec-07, a student in the "Charter to DCPS" category was enrolled at a charter school in the previous month (November 2007) and a DCPS school in the month shown.

Chart reads: In November 2007, out of all students in that month who were mobile/enrolled in a different school or not enrolled in a DC public school in the previous month, close to 65% were new to DCPS, about 5% moved from a public charter school to a DCPS school, and a little over 25% moved from a DCPS school to another DCPS school.

Data presented here are reported as percentages or rounded to the nearest 25 to avoid either over- or understating their precision. These figures are based on currently available information from the data systems of the District of Columbia Public and Public Charter Schools. Although the data are based on the most recent and accurate information available, there is an error range of about +/- 5%. The process of "cleaning" individual student records by OSSE will continue in collaboration with the participating school systems and schools with the goal of reducing error as much as possible.
